## **DETAILED ACTION**

### ***Specification***

1. The title and the abstract of the invention filed October 08, 2003 has been received and accepted by Examiner.

### ***Allowable Subject Matter***

2. Claim1-14 are allowed.

The following is an examiner's statement of reasons for allowance: As the claims were read and interpreted in light of the specification, the prior art of record fails to specifically disclose a liquid crystal display (LCD) panel having a light-transmitting first and second electrode substrates with liquid crystal layer held in between the substrates, with a pixel electrode disposed at a pixel area, a thin film transistor, and in particular, a light shielding wiring pattern with a plurality of memory wiring layers such that a reflection member that reflects incident light applied from the second electrode substrate overlaps the light-shielding wiring pattern such that one or more apertures are left unmasked in the pixel area. Spitzer et al. (U.S. Patent No. 5,654,811) teaches the basic structure of an LCD device with a liquid crystal layer held between first and second electrode substrates and a light shield for preventing incident light to a pixel transistor in an electroluminescent display, but the reference, however, fails to specifically teach a reflection member that overlaps the light-shielding wiring pattern such that the one or more apertures are left unmasked in the pixel area.
